

CrewFund

Group accommodation funding
with individual refund rights

WHU Hackathon 2026

Fictional hotel. Test SOL. Verified Localnet demo.

The group-payment problem

Three students want to book one room.

One friend collects the money.

The others depend on that friend to pay the hotel
and return contributions if the plan fails.

CrewFund fixes who can receive the pooled payment.

Payment rules

01

Each student funds

0.01 Test SOL each
Three fixed signers
One deposit per person

02

The hotel confirms

All three shares present
Fixed hotel signature
Before the deadline

03

Each student refunds

If the hotel misses the
deadline
Only the depositor's share
One refund per person

Solana enforces the escrow

A program-owned account holds the funds.

No participant can privately withdraw the pool.
The fixed hotel signs and receives the full payment.
The deadline separates confirmation from refunds.

Booking terms stay fixed.
The demonstrated program has no upgrade authority.

Working prototype and test evidence

5 passing integration tests

Exact hotel payout

Failed funding and own-share refunds

Unauthorized actions rejected

Duplicate deposits and refunds rejected

Fully funded booking without confirmation

English React / TypeScript interface

Full deposit-to-confirmation browser flow

CrewFund / Test SOL prototype

First users and a small pilot

Student clubs organising shared trips

Reach two small groups through campus clubs.
Test whether they understand deposit and refund rights.
Use a provider-controlled test wallet in each demo.

Pilot question

Will groups prefer fixed payment rules to one friend holding the pool?

Demo scope and next step

Current demo: Localnet

Fictional test hotel and four separate test wallets

0.03 Test SOL total

Devnet deployment awaits faucet funding

Next: independent wallet ownership and hotel integration

External security review before any real-money use
